Overview of health and wellbeing

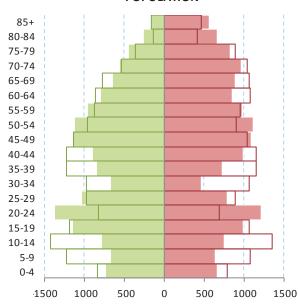

PÕLVA COUNTY

This document summarizes selected data on health and well-being in the county. The aim is to present comparable and standardized health indicators. This information gives input to the regional planning of services for improving the health and wellbeing of inhabitants.

It is compiled by specialists of National Institute for Health Development, in collaboration with Ministry of Social Affairs and Statistics Estonia.

Additional information about the data used in the overview can be found online at: www.terviseinfo.ee/maakonnatervise

STRUCTURE OF PÕLVA COUNTY'S POPULATION

☐ Men (2000) ■ Men (2010) ☐ Women (2000) ■ Women (2010)

Population: 29 220 (01.01.2011)
Percentage of Estonian population: 2%

Area: 2164,77 km²

Population density: 13,6 inhabitants per km² **County centre**: Põlva (6049 inhabitants)

Municipalities: 14, incl. 1 urban and 13 rural munici-

palities

Economic activity: agriculture, forestry and timber in-

dustry, tourism, servicing, food industry.

POSITIVE DEVELOPMENTS

- Mortality due to malignant neoplasms is the lowest in Estonia
- At-risk-of-poverty rate has declined during last few years
- Percentage of those with health insurance in workingage population is the highest in Estonia
- Incidence of hepatitis, tuberculosis and sexually transmitted diseases is lower than the average in Estonia
- Rate of teenage pregnancies is the lowest in Estonia

CHALLENGES

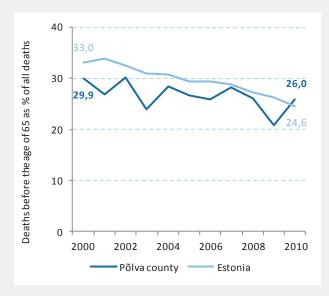

- Percentage of elderly people in the county's population is the highest in Estonia
- Average gross salary is lower than the average in Estonia, and at-risk-of-poverty rate is higher than average
- The lowest employment rate in Estonia
- The highest rate of years of life lost due to morbidity
- Mortality due to injury and poisoning is the highest in Estonia
- Highest death rates due to alcohol-related diseases and traffic accidents
- The worst self-rated health in Estonia (the lowest proportion of people who rate their health good or very
- Proportion of people whose everyday life is restricted due to health problems is the biggest in Estonia

Self-rated health (good and very good)

Administrative capacity of the municipalities (of the county)

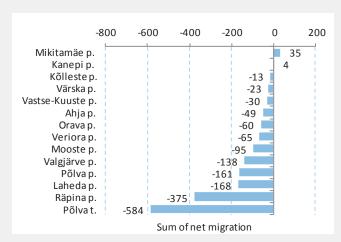

The index of administrative capacity is calculated using 26 indicators from six domains: population and area of the municipality, strength and diversity of local economy, wellbeing of inhabitants of the municipality, financial situation of the municipality, strength of the municipality's administration, and volume and diversity of the municipality's public services.

Administrative capacity of a municipality is expressed both in administrative ability and the general results of the administration on the territory of municipality. The map shows the index of administrative capacity in municipalities, average for the years 2006-2009.

Burden of disease in the municipalities (of the county)

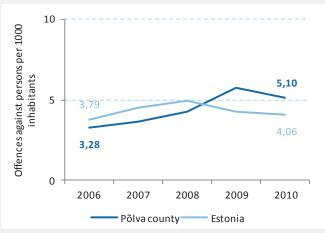

Burden of disease is calculated based on morbidity and mortality statistics; in addition the gravity of disease and people's age at the time of death are taken into account.

Burden of disease indicates how many years of life inhabitants have lost due to diseases and mortality. These are life years that people could have lived healthily, if there had not been the disease or death. Burden of disease is used as an indicator for comparing regions to each other or mapping the developments in time. The map shows years of life lost per 1000 inhabitants in 2006.
