

# Anyone can get tuberculosis!

I am at higher risk to get tuberculosis (TB) in case:

- I use drugs, especially if I inject drugs
- I am HIV positive
- I drink alcohol more than four days a week
- I have recently been in contact with TB patient
- I have had TB

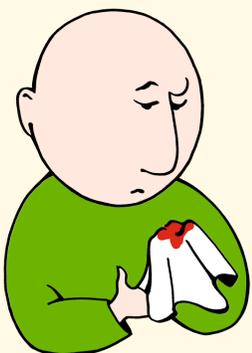

a cough that lasts for over three weeks

loss of appetite

fever, chills

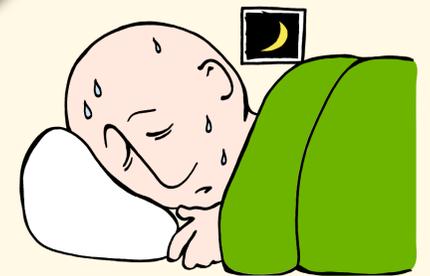

coughing up blood or sputum

weight loss

feeling weak or tired

sweating at night

I should definitely see a doctor in case I have experienced these symptoms in last three weeks:

Tuberculosis is a curable disease, if it is diagnosed in time and the treatment prescribed by the doctor is followed!
